Blog & Portfolio: anilkcs001.github.io – AL performance, integrations, security, GST and full solutions

Professional Summary

Dynamics 365 Business Central Technical Consultant with **3+ years** delivering **end-to-end BC solutions** across **Manufacturing, Education and Finance Integration**. Builds **extensions, approval workflows, posting logic, 50+ reports** and **secure integrations** (OData V4, REST, OAuth 2.0, SharePoint, callbacks). Microsoft Certified **Business Central Developer Associate (MB-820)**.

Key Achievements

- **Built a fully customized approval workflow** (multi-level, sequential, parallel, mandatory and minimum-group approvals in AL), so every document reaches the right approvers in the right order.
- **Integrated SharePoint as a FactBox:** sent uploads from a BC page to SharePoint via Microsoft Graph API and attached the link to the record, so users reach documents without leaving Business Central.
- **Implemented secure banking integration** with **AES for the data and RSA for the AES key**, so bank data stays protected end to end.
- **Delivered an integration with callbacks** (OData V4, OAuth 2.0, POSTED / FAILED, exponential back-off retry), so the source system always knows the posting status and no failure is lost.
- **Built a GST Rate Generator** on the Tax Engine: creates all missing CGST/SGST/IGST rate lines automatically, removing manual GST setup.
- **Created Dynamic Email Templates:** built own templates with placeholders for record data, triggered from standard events, so messages are reusable across processes.

Technical Skills

- **AL:** Business Central Architecture | Extensions (PTE) | Tables | Pages | Codeunits | Reports | Queries | XMLports | Interfaces | Enums | **Events & Event Subscribers** | Page Background Tasks | Permission Sets
- **Integrations: REST | JSON | OData V4 | $batch | API Pages | Web Services** | OAuth 2.0 | Retry & Error Handling | Job Queue | SOAP | Microsoft Graph | SharePoint | Power Automate | Business Events
- **Functional:** Purchase | Sales | General Ledger | Item Journals and Lot Tracking | Dimensions | Fixed Assets | Budgeting | Approval Workflows | India GST and TDS
- **Reporting & AI:** RDLC | Word Layouts | Excel Buffer | MIS Reports | Azure OpenAI | System.AI | AI Agents | AES / RSA
- **Tools & Quality:** VS Code | **Git** | **Azure DevOps** | CI/CD | Debugging | Performance (SetLoadFields, FlowFields, SIFT) | Code Review | Unit Testing | Technical Design Documents | Upgrades | Deployments | Production Support

Professional Experience

Business Central Technical Consultant

PwC India, Chennai | Aug 2023 – Present

- **Delivered end-to-end** AL solutions: design, development, testing, deployment, upgrades and support.
- **Extended standard behavior** with events, subscribers, interfaces, RecordRef/FieldRef, reusable frameworks.
- **Implemented posting and finance logic:** Purchase, Sales and G/L posting, item charge assignment, dimensions, India GST and TDS.
- **Developed integrations and 50+ reports:** API and web service integrations; RDLC, Word and Excel reports.
- **Ensured quality:** debugging, code reviews, performance tuning, design documents; Git, Azure DevOps.

Project Experience

Finance Integration Project (Logistics) | Business Central Technical Consultant | Sep 2026 – Present

Role: AL Developer – inbound integration, posting callback and error handling

- **Built the inbound integration:** an external TMS sends **Customer, Vendor, AP and AR** data through **OData V4** (single-record and **$batch**) with **OAuth 2.0**, into staging tables that are validated and posted: **100 vendors checked and created in about 7 seconds**, **100 AP/AR records in 10-12 seconds** with all error checks.
- **Implemented the posting callback:** BC sends a **POSTED / FAILED callback** with document number, batch and status message; failures go first and a posting is never sent twice.
- **Designed error handling:** each error is checked once up front, failed records are corrected and re-uploaded, and **retry with exponential back-off** covers 429/500/timeouts; a **job queue every 5 minutes** posts 100 records in about a minute.
- **Tested parallel API calls: 5 calls of 100 vendors each (500 records) finished in about 10 seconds**; also integrated the Payment Receipt API and wrote the integration guides.
- **Developed AL objects:** Tables (staging, callback log, setup), Codeunits (sender, queue, job queue), API / OData Web Services, Enums, Pages, Event Subscribers, Permission Sets.

Food Manufacturing Implementation | Business Central Technical Consultant | Present

Role: AL Developer – item requisition and fermentation process (recently started)

- **Developed the fermentation module:** a Fermentation Card per lot blocks the lot while it ferments, then converts the unfermented item to the fermented item after a configurable holding period (default 40 days) through an Item Reclassification journal, keeping lot, location, quantity and unit of measure.
- **Added traceability and alerts:** conversion log as audit trail; email notifications before, on and after the planned date with escalation for overdue lots; public facade for other extensions.
- **Built the Item Requisition module:** users request new items and route them for approval, and the Item master is created automatically on approval; added Excel import and fixed duplicate numbers for concurrent users with atomic No. Series handling.
- **Developed AL objects:** Fermentation (29 objects): Enums, Tables, Table and Page Extensions, Pages, Codeunits (management, posting, daily job, notification, facade), Permission Set. Item Requisition: Table, Pages, Codeunit (approval, Excel import).

Education Sector Implementation and Support | Business Central Technical Consultant | Jan 2025 – Present

Role: AL Developer – procurement, approvals, tax totals, integrations and AI

- **Implemented procurement and budgeting:** Purchase Requisitions, Buyer Assignment, CAPEX/OPEX budgeting and Purchase Invoice posting that routes capital purchases to Fixed Assets and consumables to expenses.
- **Built a custom approval workflow:** fully customized multi-level, sequential, parallel, mandatory and minimum-group approvals, with **Dynamic Email Templates** and Power Automate/Teams notifications.
- **Delivered tax totals and charges: GST (CGST, SGST, IGST, Cess) and TDS** totals on the Purchase Order subform using **Page Background Tasks** so the page never blocks; added "By Amount to Receive" item charge assignment through event subscribers.
- **Integrated SharePoint, banking and AI:** a reusable **SharePoint FactBox** via **Microsoft Graph API**; **bank integration with AES data encryption and RSA-protected AES key**; Azure OpenAI invoice agent; Dynamic No. Series; GST Rate Generator.
- **Developed AL objects:** Tables, Table and Page Extensions, Pages, FactBox (Page Part), Codeunits, Interfaces, Enums, Event Subscribers, Permission Sets.

Tea Industry Implementation and Support | Business Central Technical Consultant | Dec 2023 – Mar 2025

Role: AL Developer – sales automation, posting and reporting

- **Automated sales:** users upload an Excel file and the system creates Sales Invoices and handles settlement and distribution across brokers and regulatory-body transactions, removing manual data entry.
- **Delivered reporting:** RDLC and Excel reports (MIS, operational, financial, payroll and year-end) giving management clear visibility into manufacturing and sorting operations.
- **Integrated GST e-invoicing with ClearTax:** connected Business Central to the ClearTax e-invoice service for tax compliance.
- **Customized posting and dimensions:** Purchase Invoice and posting processes; extended dimensions from **8 to 13**.
- **Developed AL objects:** Reports (RDLC), Codeunits, Table and Page Extensions, Event Subscribers, Excel Buffer routines.

Technical Writing – anilkcs001.github.io

- **Performance and locking:** N+1 queries, ReadIsolation, LockTable, Commit(), Page Background Tasks.
- **Integrations and security:** HttpClient, JSON in AL, Isolated Storage, SecretText, AES and RSA.
- **Full solutions:** out-of-balance diagnostic tool, **GST rate generator**, merge PDFs in AL, amount in words (Lakh and Crore), GST and TDS explained.

Certifications

- **Microsoft Certified: Dynamics 365 Business Central Developer Associate (MB-820)**, valid through February 2027
- Career Essentials in Generative AI, Microsoft and LinkedIn
